

PROJECT IDEAS

1. **Automated Medical Image Diagnosis with Explainable AI:** Developing an AI tool that analyzes medical images like X-rays, MRI's, CT scans to detect diseases like cancer, fractures or infections.
2. **Automated job candidate screening using NLP(Natural Language Processing):** Developing a system that uses NLP to screen job candidates resumes and cover letters to match them to job description automatically.
3. **Automated content moderation system for online communities using NLP:** Developing a system that automatically identifies and filters harmful content in online platforms like social media, forums.
